TODAY’S TREATMENT/3

Diseases of the respiratory and urinary systems account for a high proportion of all consultations in general practice, justifying the 200 pages devoted to them in the third volume of Today’s Treatment. The remaining section deals with the use of antibiotics across the whole spectrum of medicine, looking at the advantages and drawbacks of the major categories and their use in clinical settings where decision-making may be difficult. Like its predecessors, Today’s Treatment/3 concentrates on practical issues and provides the busy clinician with the information he needs in his day to day practice.

Presentations
(1) Lilac-coloured enteric coated tablets containing 200mg or 500mg sodium valproate (Epilim 200 enteric coated/Epilim 500 enteric coated).
(2) Red cherry-flavoured syrup containing 200mg sodium valproate per 5ml (Epilim Syrup).

Indications
Epilepsy. In women of childbearing age, Epilim should be used only in severe cases or those resistant to other treatment.

Dosage and Administration
To be taken with or after food; tablets should be swallowed whole.
Adults: Initially 600mg/day in divided doses, increasing by 200mg/day at three-day intervals until control is achieved (maximum dose 2600mg/day).
Children over 20kg: Initially 400mg/day in divided doses, with spaced increases until control is achieved (usually in the range of 20-30mg/kg/day).
Children under 20kg: 20mg/kg/day, with spaced increases until control is achieved, up to a maximum of 50mg/kg/day.
Plasma levels of 200μg/ml should be exceeded only with caution and with monitoring of haematological function.

Contra-indications, Warnings, etc.
There are no absolute contra-indications. Side-effects: Minor gastric irritation and nausea have been observed in some patients at the start of treatment with uncoated tablets, but this can usually be overcome by using the enteric coated tablet, or relieved by standard medication. Transient hair loss has occurred in some patients; tremor, occasionally seen at high dosages, may be controlled by reduction of dosage. Oedema has been reported. Reversible prolongation of bleeding time and thrombocytopenia have been reported, but usually at doses above those recommended. Spontaneous bruising or bleeding is an indication for withdrawal of medication pending investigation. Patients receiving Epilim should be monitored for platelet function before major surgery.

Liver dysfunction, including hepatic failure resulting in fatalities, has occurred in a few patients whose treatment included Epilim. These incidents occurred during the early months of treatment. Although a causal relationship has not been established, it is recommended that liver function be investigated prior to commencing therapy and monitored at two-monthly intervals thereafter for up to six months. Should liver dysfunction be suspected, immediate withdrawal of the drug is indicated, prior to full investigation of the possible causes. Caution should be exercised when administering Epilim to patients with pre-existing liver disease.

Combined medication: When adding Epilim to existing anticonvulsant medication, e.g. barbiturates, the sedative effects of the latter may be enhanced, and it may therefore be necessary to reduce their dosage. As Epilim may potentiate the effect of mono-amine oxidase inhibitors and other antidepressants, dosage of such compounds should also be reduced.

Diabetic patients: Epilim may give false
So many patients with epilepsy are controlled by:

Epilepsy

The Institute provides postgraduate training in the various departments of Neurology.

The Out-Patient Practice is open at 10 o'clock at QUEEN SQUARE every day (except Saturday). A fee of £50 per month is charged for attending the Out-Patient Department only.

The In-Patient Practice at Queen Square is open at 10 a.m., and a limited number of clinical clerks are appointed. Fees: three months £305, six months, £615.

Whole-time courses of instruction are given during the Autumn, Winter and Spring terms. Besides these, teaching in the various neurological disciplines goes on throughout the year together with Clinical Demonstrations every Wednesday afternoon and Saturday morning as advertised in the Medical Journals.

Application should be made to the Dean at the Institute, Dr. P. C. GAUTIER-SMITH
Madopar represents a combination of levodopa and benzerazide in the ratio of 4:1.

**Dosage & Administration**
- **Dosage:** The dose is titrated to the individual patient's needs.
- **Usual starting dose:** 125 mg of Madopar B. in the morning and 125 mg in the evening.
- **Adjustments:** The dose may be increased by 125 mg every 3 to 4 days until the optimal response is achieved.
- **Maximum dose:** The maximum dose is 900 mg of Madopar B.

**Interaction**
- **Drug Interactions:** Patients on phenothiazines or other antipsychotics may experience an increased effect of levodopa.

**Side Effects**
- **Common:** Nausea, vomiting, dizziness, and abnormal movements.
- **Severe:** Parkinsonian signs, dementia, and psychiatric disturbances.

**Contraindications**
- **Precautions:** Use with caution in patients with a history of heart disease, hypertension, or diabetes.

**Precautions**
- **Monitoring:** Regular monitoring of blood pressure and heart rate is recommended.

**References**

**4+1: the right balance**

Mozart, in his Clarinet Quintet, achieved harmony with a balance of 4:1.

**625, 125 and 250 Madopar**

balancing performance in Parkinson's disease with levodopa plus benzerazide.

**Presentation**
- **Presentation:** Tablets containing levodopa and benzerazide.

**Design:**
- **Purpose:** To provide a balanced dosage of levodopa and benzerazide.
- **Patients:** Adults and children over 12 years of age.

**Indications**
- **Postencephalitic Parkinsonism**
- **Parkinson's Disease**

**Precautions**
- **Interaction:** With anticholinergics, benzodiazepines, or other drugs that may affect the central nervous system.

STATISTICS AT SQUARE ONE

by T. D. V. SWINSHAW

from the British Medical Journal

The statistical testing of data is indispensable in many types of medical investigation and a help on countless occasions in clinical practice. This book provides step-by-step instruction. Subjects covered include standard deviation, $\chi^2$ tests, $t$ tests, non-parametric tests, and correlation. The book includes sections on Fisher's exact probability test and rank correlation not published in the *B.M.J.* series. Methods specially adapted to pocket calculators.

"The ability to put symbols in sequence may well be one of the greatest advances in man's development ... This excellent and attractive volume will give you an idea into which category an article or projected article fits. The ink you save may be your own. It is superb value."

... this gem of a practice booklet squeezes the essence of biostatistics into 75 well-written, well-organized pages. Newcomers to the field will like the way obscure concepts are clarified; experts will find the book valuable as a teaching aid.
