Titrating the dose can give you the power to relieve the 'on-off' syndrome

Conventional wisdom suggested that the 'on-off' syndrome was an unalterable feature of long-term levodopa therapy. Madopar 62.5 means that this now need not always be the case. By titrating the dose and administering more frequent, smaller doses, the patient with 'on-off' syndrome and other symptoms may now obtain relief.

For many patients

Madopar 62.5 adds years to life — adds life to years

Presentation
Madopar contains levodopa and the dopa decarboxylase
inhibitor carbidopa. The dose strengths are 105 mg levodopa and
14.5 mg carbidopa, 210 mg levodopa and 29 mg carbidopa, and
285 mg levodopa and 40 mg carbidopa. The recommended starting
dosage is 105 mg levodopa, increasing to 210 mg by week 2.

Indications
Parkinson's disease: Treatment of the symptoms of idiopathic
Parkinson's disease.

Dosage
Dosage varies and should be individualized for the patient.

Contraindications
Contraindicated in patients with a known hypersensitivity to either
levodopa or carbidopa.

Precautions
Elderly patients with a history of cardiovascular disease,
Patients undergoing neurosurgery, or who have a history of
bleeding complications, should be monitored closely. Care should
be taken in patients with a history of psychosis.

Side-effects
Nausea, vomiting, and other gastrointestinal symptoms may
occur. Patients should be advised to take the medication with
food to minimize these effects.

Package Quantities
Madopar 62.5 capsules: 30, 60, 90, 120, 150, 180, and
210 mg capsules in blister packs of 10, 20, 50, or 100.

Basic NHS
Cost
Madopar capsules 62.5 mg: £1.44 per strip of 1.
Madopar capsules 250 mg: £1.17 per 10, 250 mg.

References
Precision, efficiency and reliability. Cromwell Hospital’s Department of Neurophysiology provides the Consultant Neurologist and Neurosurgeon with a proven environment for maintaining the highest standards in the practice of his specialty.

The Department incorporates the very latest technological advances in the provision of diagnostic, therapeutic, surgical, nursing and rehabilitation services. Specialists hold regular clinics in neurosurgery, neurology and clinical neurophysiology.

An extensive range of tests is at your disposal from single screening tests to complex neurophysiological and neurootological investigations suitable for all age groups.

Of particular interest to specialists is the new Cromwell Centre for Auditory and Speech Disorders. Fully equipped for paediatric audiological assessment, audiology, speech therapy and rehabilitation, this is the only purpose-built private facility of its type in the United Kingdom.

To arrange a personal visit and for further information, contact Mr. Stewart Anderson, Neurophysiologist.

London’s Cromwell Hospital.
British healthcare at its best.

CROMWELL HOSPITAL
PART OF THE LARGACTIL HERITAGE
chlorpromazine

May and Baker a record of innovation in psychotropic medicines includes the first major tranquiliser Largactil and now Piportil Depot - arguably the most useful of the depot neuroleptics in terms of:

Efficacy
- against a wide range of target symptoms of schizophrenia

Convenience
- for patients, medical and nursing staff because of a full four week duration of activity

Acceptability
- because of its greater freedom from extrapyramidal effects than other depot neuroleptics

Experience
- which enables background for dose adjustment studies, part of the continuing evaluation process.
Amplaid MK10
Multisensory Evoked Potential System...

The Amplaid MK10 is a multisensory evoked potential system designed for routine clinical procedures. The unit automatically sets up suitable stimulation and acquisition parameters for any selected test.

Operating the MK10 is a simple matter: by just touching a button the request for test selection will appear on the MK10 display; one more touch and everything is ready to start, while the display now shows the patient's ongoing activity.

The Amplaid MK10 is provided with a dual cursor for amplitude and latency measurements and two memories for validation purposes. The built-in electrode impedance tester and 115mm heat sensitive paper printer combine to provide a complete ready to operate system.

ABC OF COMPUTING

A J ASBURY

Although computers are being widely used in medicine, their possibilities and limitations are still not clear to many potential users. This book, aimed at the non-expert, describes some of the uses of computers in medicine; because most doctors' involvement will be indirect, liaising with computer experts rather than designing systems themselves, the book concentrates on concepts rather than detailed descriptions of how computers work. It provides a useful introduction for the doctor who wants to know how computers can contribute to his practice of medicine.

GERIATRIC PSYCHIATRY POSITION

The Geriatric Psychiatry Program of the Department of Psychiatry, University of Rochester School of Medicine and Dentistry, has a new faculty position at the level of Assistant Professor or above. The Geriatric Psychiatry Program has highly developed clinical resources and services. Present and future research programs with geriatric populations include clinical and basic science studies of Alzheimer's disease, descriptive psychopathology, neuropsychological assessment, experimental therapeutics, social support systems, and health services planning. It has major educational commitments to fellowship (NIMH funded) and residency training, and undergraduate medical education. Work sites include Monroe Community Hospital, a large University-affiliated chronic disease and geriatric facility having a long tradition of basic science and clinical geriatric research, and the University of Rochester Medical Center.

QUALIFICATIONS: New York State license to practice medicine, or eligible. Board certification in Psychiatry and prior research fellowship training is preferred.

SALARY: Contingent on level of clinical and research experience.
Write or call David D. Bonacci, M. D., Director, Geriatric Psychiatry Program, University of Rochester Medical Center, 300 Crittenden Boulevard, Rochester, New York 14642; telephone: (716) 275-3540.
We are an equal opportunity employer.

Journal of Mental Deficiency Research

Published on behalf of the Royal Society for Mentally Handicapped Children and Adults

EDITOR
W.I. Fraser  Gogarburn Hospital
Edinburgh

The Journal of Mental Deficiency Research is devoted exclusively to the scientific study of mental deficiency and publishes papers reporting original observations in this field. The subject matter includes clinical case reports, pathological reports, biochemical investigations, genetics and cytogenetics, psychological, educational and sociological studies, the results of animal experiments or studies in any discipline that may increase knowledge of the causes, prevention or treatment of mental handicap. Reviews are submitted from experts from time to time on themes in which recent research has produced notable advances. All papers are assessed by expert readers

Subscription Information
Journal of Mental Deficiency Research is published quarterly
Subscription rates for 1984 are
£26.50 (U.K.)
£32.00 (overseas)
$62.50 (U.S.A. & Canada post paid)

Neurological Research

An Interdisciplinary Quarterly Journal

George M. Austin, Editor

This important new journal emphasizes an interdisciplinary approach to problems of neurology and neurological science. Subjects covered include neurology, neurological surgery, psychobiology, biomathematics, neuropathology, biochemistry, physiology, and cybernetics.

The Editorial Board is comprised of scientists who have been innovators in the development of new ideas and techniques for the solution of clinical and neurological problems. Full-length research papers as well as shorter research papers, technical reports, and review articles are included in the journal.

Selected articles from the third issue
Bi-hemispheric CBF and Its CO2 Reactivity of TIA: and Completed Strokes in ICA Occlusions • Cerebral Blood Flow and CO2 Reactivity in Transient Ischemic Attacks: Comparison between TIA: due to the ICA Occlusion and ICA Mild Stenosis • The Effects of Spinal Cord Injury on Somatosensory Evoked Potentials Produced by Interactions Between Afferent Pathways • Effect of Hyperthermia on a Thalamocortical System in the Kitten and the Cat: A Preliminary Study • Hypothalamus and Brown Fat: White and Brown Adipose Tissue Lipolysis in Weanling Rats with Dorsomedial Hypothalamic Lesions • The Effect of Hypertension on Ischemic Cerebral Edema in Spontaneously Hypertensive Rats • Tomographic Assessment of Cerebral Perfusion Following EC-IC Bypass.
