ELIXIR GABAIL

The Ideal Sedative in all Nervous Affections

ELIXIR GABAIL combines the sedative action of Bromide and Chloral Hydrate with the nerveine and anti-spasmodic deodorised Valerianate.

Pharmaceutically it is as pleasant and palatable as it is efficacious from the therapeutic standpoint, the disagreeable odour and flavour of the Valerian having been completely removed without in any way impairing its medicinal value.

In “war” neuroses ELIXIR GABAIL allays anxieties, doubts and fears, and relieves mental stress engendered through heightened tension and increased nervous strain.

Dosage: One tablespoonful in water twice or thrice daily.
As a hypnotic: Two tablespoonfuls at bedtime.
Supplied in bottles of 187 c.c., 16 oz., and in bulk for Hospital use.

Literature and sample on request.

THE ANGLO-FRENCH DRUG CO. LTD.
11-12 GUILFORD STREET :: LONDON, W.C.1
Here is the simplest form of what physiologists call a “nerve-muscle preparation.” It is merely a living muscle dissected away from the body, but with its nerve still attached. In the experiment the two tendons of the muscle are held by the two hands. An assistant pinches the nerve with forceps. The muscle thereon contracts and draws the two hands together.

*From Charles Singer, “A short history of medicine” (Clarendon Press, Oxford).*

**A 17th Century Pioneer**

By virtue of his classic experiments on “nerve-muscle preparation,” Jan Jacobz Swammerdam (1637-1680) founded the science of neuro-physiology. Great strides have since been made, as a result, in neurological practice generally.

To-day, electro-surgical apparatus represents a noteworthy advance in technique as applied to surgery of the nervous system. Here the Marconi Therator Minor, type MME.3, provides a delicate cutting action, entirely free from char-ring and without the slightest trace of faradism. It is thus particularly suitable for operations on or near the nerves. It may be said, in fact, that the performance of this Diathermy opens up new vistas in the field of neurological surgery. Further particulars on request.

Anti-Convulsant

EPTOIN TABLETS

SOLUBLE PHENYTOIN

A preparation of soluble phenytoin supplied as a sugar-coated tablet for the treatment of epilepsy.

Eptoin Tablets are free from the narcotic effects usually associated with bromides and barbiturates and greatly decrease the number of convulsive seizures in cases which have not responded satisfactorily to other forms of treatment.

If a patient has already been treated with barbiturates or bromides, these drugs should be withdrawn slowly as their sudden cessation before a reservoir of soluble phenytoin has been built up may precipitate attacks.

The average daily dose is one 0.1 gm. (1½ grains) Eptoin Tablet during or just after meals three times a day. Supplied in tablets containing 0.1 gm. (1½ grains).

Bottle of 100 tablets ... 5/3

TRYPARASAMIDE
‘B. W. & CO.’

A QUINQUEVALENT ARSENICAL FOR
INTRAVENOUS OR INTRAMUSCULAR
INJECTION

The unusual penetrative properties of Tryparsamide render it of specific value in treponemal or trypanosomal invasion of the central nervous system. In neurosyphilis, it may be used alone or in conjunction with pyrogenic therapy.

The exceptional purity of Tryparsamide ‘B. W. & Co.’ ensures consistent therapeutic results and the minimum of toxic reactions.

TRYPARASAMIDE ‘B. W. & CO.’
(without distilled water)
Ampoules of 1 gm., 2 gm. and 3 gm. supplied singly and in boxes of 10.

Also available
‘HYPOLOID’ as TRYPARASAMIDE
Ampoules of 1 gm., 2 gm. and 3 gm., each with ampoule of sterile distilled water.

BRAND

butobarbitone

for insomnia and anxiety states

At the present time the practitioner is faced with an increasing number of patients suffering from insomnia and anxiety states. These cases are adequately treated by the discriminate prescribing of 'Soneryl.' Being rapidly eliminated, this product seldom gives rise to post-hypnotic dullness, and so enables the patient to go about his work refreshed in mind and body. 'Soneryl' may be taken over lengthy periods without the danger of habit formation.

BRAND

SODIUM ISO-AMYL ETHYL BARBITURATE

IN NEUROPSYCHIATRY

The barbiturates in general are central nervous depressants with which almost any degree of depression, from light sedation to deep hypnosis may be obtained through proper selection of drug, dose and route of administration.

With ‘SODIUM AMYTAL’ it is possible to obtain prompt and prolonged narcosis in psychiatric individuals or produce a controlled hypnosis for psychological study.

Other suggested indications are the securing of restful sleep, the control of extreme excitement and the control (or prevention) of convulsions during insulin shock treatment.

A dosage scheme for establishing the prognosis in Schizophrenic patients has been reported.

‘SODIUM AMYTAL’ is issued as ‘PULVULES’ brand filled capsules in two strengths, one grain and three grains; also in ampoules of 0.125 gm., 0.25 gm., 0.5 gm. and 1 gm. for parenteral use.

‘Prostigmin’ in Muscle Spasm

Some of the symptoms of rheumatoid arthritis resemble those of anterior poliomyelitis. In view of the beneficial results obtained in the latter disease, ‘Prostigmin’ was tried in rheumatic conditions to relieve muscle spasm and prevent deformities. ‘Prostigmin’ was found to be “a far more efficacious remedy for relieving such spasm than any other medication which has been previously employed”.

The usual course of treatment was the subcutaneous injection of 1 c.c. (0·5 mg.) of ‘Prostigmin’ together with 0·6 mg. (gr. 1/100) of atropine sulphate every other day. In addition a dose of ½ to 3 ‘Prostigmin’ tablets was given generally with 0·6 to 1·2 c.c. belladonna tincture in order to avoid any possible side reactions. J. Amer. Med. Assn., 1944, p. 1237.

Abstract of above article available on request.

The Parasympathetic System

Prostigmin’ is used in any condition in which it is desired to stimulate the parasympathetic nervous system or to damp down the effects resulting from over-stimulation of the sympathetic. It has therefore an exceedingly wide range of therapeutic usefulness.

‘PROSTIGMIN’
PARASYMPATHICOMIMETIC

‘Prostigmin’ is a ‘Roche’ trade mark. The preparation to which it is applied is issued in 1 c.c. ampoules, each containing 0·5 mg., in a concentrated injectable solution (2·5 mg. per c.c.) in bottles of 5 c.c. and 15 mg. oral tablets.

Advances in Vitamin B Therapy

‘Benerva’ Compound tablets combine in one single preparation the properties of the three best known and most active constituents of the vitamin B complex. In the few food-stuffs rich in the complex the different factors vary within wide limits; in ‘Benerva’ Compound tablets, aneurine, riboflavin and nicotinic acid amide are presented in constant proportions and comparatively large doses.

‘BENERVA’ COMPOUND

Each tablet contains: Aneurine 1 mg. (320 International Units B.P.), riboflavin 1 mg. (equal to 400 to 500 Sherman-Bourquin Units) and nicotinic acid amide (P.P. factor) 15 mg.

Packings: Bottles of 25, 100 and 500.

BELLERGAL
CONTROLS AUTONOMIC
HYPEREXCITABILITY

BELLERGAL is the treatment of choice of autonomic nervous disorders. It is based on the new conception that such disorders are seldom purely vagotonic or sympathicotonic, but are most frequently amphotonic in character, i.e., accompanied by disturbance in both divisions of the autonomic nervous system.

By the combined action of Femergin, inhibitor of the sympathetic, Bellafloline, inhibitor of the parasympathetic and phenobarbitone, sedative of the central nervous system, Bellergal not only controls peripheral autonomic over-action, but also exerts a valuable sedative action on the higher centres.

For
Epilepsy

THE widespread use of 'Epanutin' in the treatment of
epilepsy during the past few years has provided ample
evidence that this anti-convulsant can reduce the frequency
of epileptic seizures in a large number of cases. 'Epanutin'
is without the hypnotic and narcotizing effects of drugs
belonging to the barbituric acid class.

It has been shown, however, that a striking synergism exists
between 'Epanutin' and phenobarbitone. The combined
use of these two drugs has been found to be more effective
in some cases than the use of either drug alone. Cases of
epilepsy that do not respond to treatment with pheno-
barbitone often yield to these two drugs together, and some
authorities are of the opinion that the combination should
be tried in every new case of epilepsy.
Capsules containing 0.1 gm. (1/2 grains) of 'Epanutin'
(Soluble Phenytoin) with 0.05 gm. (3/4 grain) of Phenobarbitone
are supplied.

ST. ANDREW'S HOSPITAL
FOR NERVOUS AND MENTAL DISORDERS
NORTHAMPTON

President—The Most Hon. the Marquess of Exeter, K.G., C.M.G., A.D.C.
Medical Superintendent: Thomas Tennent, M.D., F.R.C.P., D.P.H., D.P.M.

This Registered Hospital is situated in 130 acres of park and pleasure grounds. Voluntary patients, who are suffering from incipient mental disorders or who wish to prevent recurrent attacks of mental trouble; temporary patients, and certified patients of both sexes are received for treatment. Careful clinical, bio-chemical, bacteriological, and pathological examinations. Private rooms with special nurses, male or female, in the Hospital or in one of the numerous villas in the grounds of the various branches can be provided.

WANTAGE HOUSE

This is a Reception Hospital in detached grounds with a separate entrance, to which patients can be admitted. It is equipped with all the apparatus for the complete investigation and treatment of Mental and Nervous Disorders by the most modern methods; insulin treatment is available for suitable cases. It contains special departments for hydrotherapy by various methods, including Turkish and Russian baths, the prolonged immersion bath, Vichy Douche, Scotch Douche, Electrical baths, Plombières treatment, etc. There is an Operating Theatre, a Dental Surgery, an X-Ray Room, an Ultra-Violet Apparatus, and a Department for Diathermy and High-Frequency treatment. It also contains Laboratories for bio-chemical, bacteriological, and pathological research. Psychotherapeutic treatment is employed when indicated.

MOULTON PARK

Two miles from the Main Hospital there are several branch establishments and villas situated in a park and farm of 650 acres. Milk, meat, fruit and vegetables are supplied to the Hospital from the farm, gardens and orchards of Moulton Park. Occupational therapy is a feature of this Branch, and patients are given every facility for occupying themselves in farming, gardening and fruit growing.

BRYN-Y-NEUADD HALL

The Seaside house of St. Andrew’s Hospital is beautifully situated in a Park of 330 acres, at Llanfairfechan, amidst the finest scenery in North Wales. On the North-West side of the estate a mile of sea-coast forms the boundary. Patients may visit this Branch for a short seaside change or for longer periods. The Hospital has its own private bathing house on the seashore. There is trout-fishing in the park.

At all the branches of the Hospital there are cricket grounds, football and hockey grounds, lawn tennis courts (grass and hard courts), croquet grounds, golf courses and bowling greens. Ladies and gentlemen have their own gardens, and facilities are provided for handicrafts, such as carpentry, etc.

For terms and further particulars apply to the Medical Superintendent (Telephone Nos.: 2356 and 2357 Northampton), who can be seen in London by appointment.
NATIONAL HOSPITAL
QUEEN SQUARE
For the Relief and Cure of Diseases of the Nervous System including Paralysis and Epilepsy.
LONDON, W.C.1

THIS HOSPITAL is a School of Medicine and has been recognised by the Conjoint Board of England as a place where part of the fifth year may be devoted to clinical work.

THE OUT-PATIENT PRACTICE is open at 10.30 o'clock every day (except Saturday). Clinical Assistants are appointed to the Physicians for Out-patients for six months.

THE IN-PATIENT PRACTICE is open at 10 o'clock.

A limited number of CLINICAL CLERKS will be appointed. Fees: three months, £5 5s. ; and six months, £7 7s.

A fee of £2 2s. for three months, or £1 1s. for one month, is charged for attending the Out-patient Department only.

Clinical Demonstrations are given on Saturday mornings during term.

Application should be made to the Dean of the Medical School.
Treasurer: The Right Hon. Lord McGowan.
J. PURDON MARTIN,
Acting Dean of the Medical School.

A modern country house, 12 miles from Marble Arch, in attractive secluded grounds.

Fees from 10 guineas per week, inclusive. Cases under Certificate. Voluntary and Temporary patients received for treatment.

DOUGLAS MACAULAY, M.D., D.P.M.
To combat apathy and psychomotor retardation

There is ample evidence in the published literature to show that ‘Benzedrine’ Tablets are primarily useful in depressions characterized by apathy and psychomotor retardation. With such patients the compound will often produce some or all of the following effects: (a) Increased mental activity, interest, and accessibility; (b) Increased self-assurance, optimism, and a sense of well-being; (c) Psychomotor stimulation, and an increased capacity for physical and mental effort.

It should be borne in mind, however, that ‘Benzedrine’ Tablets are contra-indicated in patients manifesting anxiety, hyperexcitability, or restlessness. The tablets should be used only under medical supervision, and their suitability, as well as their correct dosage, should be determined for each individual.

‘BENZEDRINE’ TABLETS

Each tablet contains 5 mg. β-aminopropylbenzene (amphetamine) sulphate.

Main Indications: Fatigue and Depression, Narcolepsy, Postencephalitic Parkinsonism, Primary Dysmenorrhoea, Travel Sickness, Alcoholism and Drug Addiction.

Supplies for clinical trial sent on the signed request of physicians.
