#### EDITORIAL NOTICES

THE EDITORIAL COMMITTEE will welcome original papers. They should be addressed to the Editor, *Journal of Neurology, Neurosurgery and Psychiatry*, Department of Neurology, Radcliffe Infirmary, Oxford. Papers are accepted on the clear understanding that the subject matter has not been and will not be published in a separate journal.

Papers should deal with original matter and the discussion should be limited to relevant questions. Contributions should be as concise as possible and a short summary of conclusions should accompany each paper. Manuscripts should be typewritten and carefully revised, as alterations in print are costly and, apart from verbal corrections, will be charged to the contributor.

Photographs and photomicrographs should be printed on glossy paper; they should be submitted unmounted, and lettering, when required, should be indicated on tracing paper fixed over the print. Drawings and diagrams should be done boldly in black ink, and any lettering to be done in the editorial office lightly inserted in pencil. Legends should be typed on a separate sheet of paper.

References to papers in the text should be made by inserting the name of author followed by year of publication in parentheses. At the end of the paper, references should be arranged in alphabetical order of author's name. Such references should give author's name, followed by initials and year of publication in brackets. The name of the journal in which the article appeared should follow and should be abbreviated according to the World List of Scientific Periodicals. The volume number should be given next in arabic numerals, followed by number of first page of article.

Brown, A. B. (1845). *Rev. Neurol.*, 169, 427.

REPRINTS. Fifty reprints will be given to the author or divided among the authors. If desired, further reprints may be obtained by application to the Publishing Manager, B.M.A. House, Tavistock Square, but notice must be given when the proof is returned.

SUBSCRIPTION. £2 2s. net, per annum, post free. Orders, including orders for single copies, should be sent to the Publishing Manager, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1.

Applications for advertisement space should be directed to the Advertisement Manager, British Medical Association, B.M.A. House, Tavistock Square, London, W.C.1.

### Summary

The disturbances of oculomotor function accompanying extradural haemorrhage have been investigated.

A study of pathological material demonstrates that (1) the disturbances of oculomotor function are due to deformation of the third nerve produced by the development of a tentorial herniation and the consequent displacement and distortion of the mid-brain, and (2) the site of the involvement is the trunk of the nerve where it is slung across the interval, the "tentorial gap", bounded by the margin of the tentorial notch laterally, the dorsum sellae anteriorly, and the brain stem posteriorly.

The manner in which the third nerves are involved, leading to the development of signs in the oculomotor field, is detailed.

Attention is directed to the pattern of pupillary change and to its diagnostic and prognostic significance. The behaviour of the pupils provides a delicate indicator of the changes occurring at the base of the brain.
