When sleep disturbance compounds depression...

Sinequan*

brand of doxepin

settles the mind for sleep while treating the underlying depression.

▷ Sedative tricyclic antidepressant.
▷ Once nightly dosage.

Indications: depression with or without anxiety. Contraindications: glaucoma, urinary retention, hypersensitivity to the drug. Side effects: dry mouth and drowsiness are most commonly reported. Precautions: Sinequan may potentiate other compounds e.g. monoamine oxidase inhibitors, not recommended in pregnancy or children under 12 years of age. Dosage: range 30mg to 300mg daily in divided doses; up to 100mg may be given as a single dose at night. Packs and Basic N.H.S. Cost: 10mg capsules (PL 57/5032), pack of 100 £2.98; 25mg capsules (PL 57/5033), pack of 100 £4.24; 50mg capsules (PL 57/5034), pack of 100 £7.01; 75mg capsules (PL 57/0133), pack of 60 £6.64

PFIZER LIMITED, SANDWICH, KENT
A new generation of Micra Titanium Instruments.

Downs Surgical's new range of Micra titanium forceps offers advances in design and quality with a complete choice of delicate tips. This new generation of Micra titanium forceps incorporates the requests for improvement revealed in a world-wide survey of Micra Instrument users. Now these improvements are made possible due to our improved titanium technology. Straight, curved and colibri forceps are available with tying platforms on tying, notched and toothed tips or as plain forceps.

The Medelec MS6 System has been specially designed on the modular principle for a wide range of applications in research, diagnosis and teaching.

It is based on the MS6 Display and Fibre Optic Recording Unit which displays the acquired signals and produces inexpensive daylight developed paper records for a wide range of plug-in modules which include stimulus generators, biological amplifiers, averagers, analysers and trigger/delay units.

Medelec also offer visual and auditory stimulators, a wide range of surface and needle electrodes for stimulation and signal acquisition and other accessories.

Applications for the MS6 System include:
Electromyography
Sensory and Motor Nerve Conduction Velocity
Action Potential Analysis
Somato Sensory Responses
Single Fibre EMG
Neuro-Ophthalmology
Ocular Myography and Kinesis
Electro-Retinography
Electro-Oculography
Visual Evoked Potentials
Neuro-Otology
Electrocochleography
Brain Stem Responses
Nystagmography
Evoked Response Audiometry
Facial Nerve Measurements
Kinesiology
Polgon Limb Angle Studies

In North and South America make enquiries about comparable equipment to:

Presentations
(1) Lilac-coloured enteric coated tablets containing 200 mg or 500 mg sodium valproate (Epilim 200 enteric coated/Epilim 500 enteric coated).
(2) Red cherry-flavoured syrup containing 200 mg sodium valproate per 5 ml (Epilim Syrup).

Indications
Epilepsy. In women of childbearing age, Epilim should be used only in severe cases or those resistant to other treatment.

Dosage and Administration
To be taken with or after food; tablets should be swallowed whole.
Adults: Initially 600 mg/day in divided doses, increasing by 200 mg/day at three-day intervals until control is achieved (maximum dose 2600 mg/day).
Children over 20 kg: Initially 400 mg/day in divided doses, with spaced increases until control is achieved (usually in the range of 20-30 mg/kg/day).
Children under 20 kg: 20 mg/kg/day, with spaced increases until control is achieved, up to a maximum of 50 mg/kg/day.
Plasma levels of 200 μg/ml should be exceeded only with caution and with monitoring of haematological function.

Contra-Indications, Warnings, etc.
There are no absolute contra-indications. Side-effects: Minor gastric irritation and nausea have been observed in some patients at the start of treatment with uncoated tablets, but this can usually be overcome by using the enteric coated tablet, or relieved by standard medication. Transient hair loss has occurred in some patients; tremor, occasionally seen at high dosages, may be controlled by reduction of dosage. Oedema has been reported. Reversible prolongation of bleeding time and thrombocytopenia have been reported, but usually at doses above those recommended. Spontaneous bruising or bleeding is an indication for withdrawal of medication pending investigation. Patients receiving Epilim should be monitored for platelet function before major surgery.

Liver dysfunction, including hepatic failure resulting in fatalities, has occurred in a few patients whose treatment included Epilim. These incidents occurred during the early months of treatment. Although a causal relationship has not been established, it is recommended that liver function be investigated prior to commencing therapy and monitored at two-monthly intervals thereafter for up to six months. Should liver dysfunction be suspected, immediate withdrawal of the drug is indicated, prior to full investigation of the possible causes. Caution should be exercised when administering Epilim to patients with pre-existing liver disease.

Combined medication: When adding Epilim to existing anticonvulsant medication, e.g. barbiturates, the sedative effects of the latter may be enhanced, and it may therefore be necessary to reduce their dosage. As Epilim may potentiate the effect of mono-amine oxidase inhibitors and other antidepressants, dosage of such compounds should also be reduced. Diabetic patients: Epilim may give false
So many patients with epilepsy are controlled by

**Epilem 200 enteric coated**

For the new improved dosage form, prescription strength.

Women of child-bearing age: Since women of child-bearing age constitute a specified group of patients for whom it has been shown that the long-acting ellipticated enteric coated tablet contains other ingredients than those of the standard enteric coated tablet, the dosage should be carefully monitored.

Read the patient information leaflet that comes with the drug for the full details of these instructions.

MADOPAR®
levodopa plus benserazide
balanced for optimal performance in Parkinson's disease
62.5, 125 and 250

Mozart, in his Clarinet Quintet, achieved harmony with a balance of 4 + 1.

Roche, with Madopar, struck the right balance of 4 + 1 with levodopa and the decarboxylase inhibitor benserazide. Chosen from several ratios as the one giving the best results in clinical practice, this combination has proved its rightness over a decade of clinical experience.

The 4 + 1 preparation of levodopa and benserazide has recently added another string to its bow. In a comparative trial it was shown to be preferred by patients to a 10 + 1 preparation of levodopa and carbidopa because of its better gastro-intestinal tolerance in the critical first three months of treatment^2
Micra-fine
A New Range of Fine Microsurgical Titanium Instruments
specifically designed for a wide range of procedures including
micro-anastomosis

Developed jointly by Downs Surgical
and Micra from the original
Microsurgical Instruments designed
by Dermot Pierse
This new range of instruments is ideally suited to all
types of microsurgery and especially suitable for the
anastomosis of very small vessels.
Therefore there are applications in Microvascular
Surgery, Plastic Surgery (e.g. replanting digits),
Gynaecology (e.g. repair of fallopian tubes), Urology
(e.g. reversal of vasectomy), Neurosurgery,
Orthopaedic Surgery, Hand Surgery and all other
fine surgical procedures performed under the
microscope, with telescopic loupes or with simple
binocular loupes.

Manufactured in Titanium
The particular metallurgical properties of titanium
make it the ideal material for fine surgical instruments.
Titanium instruments are non magnetic, lighter weight,
have greater strength and are longer lasting than
conventional stainless steel micro surgical instruments.
The blue titanium oxide finish minimises the light
reflection under the microscope.

Promising Results

Diazepam is indicated for the relief of spasticity in multiple sclerosis, other spinal lesions, and spastic convulsions for the treatment of spasticity of cerebrovascular and young adults (under 25 years of age). Dosage is as follows to commence treatment with 1.5mg daily at a daily dose of 2mg since in divided doses, increasing slowly at intervals of at least 3 days, until the optimum effect is achieved. Satisfactory results are usually seen within 3 weeks but gradual adjustment is often necessary to meet the requirements of individual patients. A maximum daily dose of more than 10mg is not advised unless the patient is in hospital and under close supervision. There have been rare reports of death and severe reactions, including coma, convulsions, and respiratory distress, extrapyramidal, cardiovascular, and psychiatric reactions, especially in the elderly. Diazepam should be administered in accordance with the instructions and the product literature.
Dantrium (dantrolene sodium)
directly relaxes skeletal muscle
and as a result may help in the rehabilitation process

"Dantrium will be of most benefit to the patient whose functional rehabilitation has been delayed by the sequelae of spasticity."

The Institute provides postgraduate training in the various departments of Neurology.

The Out-Patient Practice is open at 10 o'clock at QUEEN SQUARE every day (except Saturday). A fee of £50 per month is charged for attending the Out-Patient Department only.

The In-Patient Practice at Queen Square is open at 10 a.m., and a limited number of clinical clerks are appointed. Fees: three months £305, six months, £615.

Whole-time courses of instruction are given during the Autumn, Winter and Spring terms. Besides these, teaching in the various neurological disciplines goes on throughout the year together with Clinical Demonstrations every Wednesday afternoon and Saturday morning as advertised in the Medical Journals.

Application should be made to the Dean at the Institute, Dr. P. C. GAUTIER-SMITH.

The Functions of Sleep

edited by
René R. Drucker-Colin
Mario Shkurovich
and M. B. Sterman
1979, 312pp., 0.12.222340.3
£14.80 (UK only)/$22.50

A unique volume, The Functions of Sleep explores the question of why we sleep rather than how we sleep. Current knowledge on the structure of the sleep process is synthesized incorporating the most recent findings of experimental inquiry into developmental, neurochemical, and clinical aspects of sleep.

The contributors to The Functions of Sleep are from disciplines as diverse as ethology and neurophysiology. The knowledge presented, though of an inter-disciplinary nature, is integrated to provide the reader with a coherent treatment of contemporary data.

In pursuing a better understanding of the why of sleep this book will prove indispensable to neuroscientists, neurologists, psychiatrists, psychophysicologists, and sleep researchers.
