

When sleep disturbance compounds depression . . .

# Sinequan<sup>\*</sup>

brand of doxepin

\* Trade Mark

settles the mind for sleep while treating the underlying depression.

▶ Sedative tricyclic antidepressant.

▶ Once nightly dosage.

**Indications:** depression with or without anxiety. **Contraindications:** glaucoma, urinary retention, hypersensitivity to the drug. **Side effects:** dry mouth and drowsiness are most commonly reported. **Precautions:** Sinequan may potentiate other compounds (e.g. monoamine oxidase inhibitors); not recommended in pregnancy or children under 12 years of age. **Dosage:** range 30mg to 150mg daily in divided doses; up to 100mg may be given as a single dose at night. **Packs and Basic N.H.S. Cost:** 10mg capsule (PL 57 5032), pack of 100, £4.24; 25mg capsules (PL 57 5033), pack of 100, £4.24; 50mg capsules (PL 57 5034), pack of 100, £7.01; 75mg capsules (PL 57 0133), pack of 60, £6.64. Full information is available on request to the Company.

## SEMINARS IN NEUROLOGICAL SURGERY

### CLINICAL MANAGEMENT OF PITUITARY DISORDERS

*Edited by George T. Tindall and William F. Collins*

This volume provides a modern view of the clinical management of pituitary tumors, including comprehensive reviews of new methodologies from the fields of neuro-

surgery, endocrinology, radiation therapy, neuropathology, and neuroradiology. **470 pages, \$53.72 (1979)**

### NEURAL TRAUMA

*Edited by John A. Popp, Robert S. Bourke, Louis R. Nelson, and Harold K. Kimelberg*

This volume reviews the advances made in the clinical care of the neurally traumatized individual. Topics discussed include blood flow and metabolism in traumatized central nervous tissue, mechanisms of central nervous system edema, data utilization and prognostica-

tions in head and spinal cord injury, monitoring of physiological parameters in CNS trauma, CT scanning as an aid to prognosis, experimental trauma, and treatment of clinical CNS trauma. **405 pages, \$47.60 (1979)**

### SURGERY OF THE POSTERIOR FOSSA

*Edited by William A. Buchheit and Raymond C. Truex, Jr.*

This text is a practical clinical review of the posterior fossa. It includes a review of the anatomy, physiology, and pathology of this area of the brain, along with an

up-to-date approach to certain surgical problems, including diagnostic studies, operative complications, and surgical techniques. **197 pages, \$29.92 (1979)**

### PEDIATRIC NEUROLOGICAL SURGERY

*Edited by Mark S. O'Brien*

This volume focuses on pediatric aspects of neurological surgery with emphasis on current advances in diag-

nostic techniques as well as specific disorders and their neurosurgical management. **216 pages, \$32.64 (1978)**

### SPINAL DEFORMITIES AND NEUROLOGICAL DYSFUNCTION

*Edited by Shelley N. Chou and Edward L. Seljeskog*

*"The clarity and directness with which the material is presented make this book a pleasure to read. . . This book should delight a large audience of both neurosurgeons and orthopedists and should be required read-*

*ing for physicians and paramedical personnel involved in the long-term care of patients with spinal/neurological problems."*—*Journal of Neurosurgery*  
**300 pages, \$42.16 (1978)**

### Another Important Publication!

### FUNCTIONAL NEUROSURGERY

*Edited by Theodore Rasmussen and Raul Marino, Jr.*

This volume reviews the current state of the art in that area of neurosurgery devoted to the treatment of a variety of disabling symptoms, including pain, movement

disorders, epilepsy, spasticity, certain endocrine abnormalities, and behavioral and psychiatric disturbances. **288 pages, \$38.08 (1979)**

# MS6 The most versatile electrophysiological system

The Medelec MS6 System has been specially designed on the modular principle for a wide range of applications in research, diagnosis and teaching.

It is based on the MS6 Display and Fibre Optic Recording Unit which displays the acquired signals and produces inexpensive daylight developed paper records for a wide range of plug-in modules which include stimulus generators, biological amplifiers, averagers, analysers and trigger/delay units.

Medelec also offer visual and auditory stimulators, a wide range of surface and needle electrodes for stimulation and signal acquisition and other accessories.

Applications for the MS6 System include:

#### **Electromyography**

Sensory and Motor Nerve Conduction Velocity  
Action Potential Analysis  
Somato Sensory Responses  
Single Fibre EMG

#### **Neuro-Ophthalmology**

Ocular Myography and Kinesis  
Electro-Retinography  
Electro-Oculography  
Visual Evoked Potentials

#### **Neuro-Otology**

Electrocochleography  
Brain Stem Responses  
Nystagmography  
Evoked Response Audiometry

Facial Nerve Measurements

#### **Kinesiology**

Polgon Limb Angle Studies

# JOURNAL OF MENTAL DEFICIENCY RESEARCH

Editor: Dr. B. W. Richards

**THE JOURNAL OF MENTAL DEFICIENCY RESEARCH** contains original research on medical and psychological problems relevant to mental sub-normality.

Recent articles include:

**Treatment of Self-Injurious Behaviour with a GABA (Gamma-Aminobutyric Acid) Analogue**, D. A. Primrose.

**Children with Supernumerary X-Chromosome. A ten-year follow-up study of schoolchildren in special classes**, H. Forssman, Inga Thuwe and B. Eriksson.

**An Overview of Significant Research on Viral Infections of the Fetus Associated with Congenital Defects and Mental Deficiencies**, S. K. Sinha.

**Erythrocyte Copper Levels in Children with Trisomy 21**, B. Mallet, P. Poulet, Segolene Ayme, Marie-Genevieve Mattei, J. F. Mattei and P. Rebuffel.

**Blood Pressure in Down's Syndrome**, B. W. Richards and Fatima Enver.

**Dermatoglyphic Distances and Position of 21 Trisomy Mosaics**, Danuta Loesch.

**Some Characteristics of a Population of Mentally Retarded Young Adults in a British City. A Basis for Estimating some Service Needs**, S. A. Richardson, Mindy Katz, Helene Koller, Janice McLaren and B. Rubinstein.

**Discrimination of Size, Form and Order in Mongol and Other Mentally Handicapped Children**, B. Stratford.

# CELLOLITE<sup>TM</sup> SURGICAL SPONGES

CELLOLITE<sup>TM</sup> is a white, synthetic, X-Ray detectable sponge designed to overcome all the drawbacks of conventional absorbent materials.

The main characteristics of CELLOLITE<sup>TM</sup> — its extreme softness and high degree of conformability, its rapid wicking rate and high absorbency capacity, its overall X-Ray opacity and fibre-free nature, all serve to ensure that CELLOLITE<sup>TM</sup> is the only really safe and efficient sponge for Neurosurgery.

In short, no other material can match the properties of CELLOLITE<sup>TM</sup>.

Why struggle on using the same old fibrous patty when you can take a giant step forward with CELLOLITE<sup>TM</sup>? In these days of Space Age surgical techniques why 'make do' with conventional patties?

Use CELLOLITE<sup>TM</sup> Surgical Sponges, the product born out of Space Age technology, and benefit from the superior properties of a sponge with the needs of the Twenty-first Century in mind.

Benefit from the softness and non-abrasive character, the overall X-Ray opacity possible due to 'state of the art' encapsulation of Barium Sulphate particles chemically bonded to the sponge, and, so important in delicate surgery, the fibre-free nature of CELLOLITE<sup>TM</sup> which guarantees that no fibres can be shed into the wound, virtually eliminating the risk of granulomas etc. which are a hazard when using conventional patties.

What other product can offer so much?

Use CELLOLITE<sup>TM</sup> the ideal Neurosurgical Sponge.

# New Madopar 62.5 in Parkinson's Disease Precision is the point.

Madopar has already changed the outlook of many patients with Parkinson's disease. The introduction of a new low-strength capsule, Madopar 62.5, offers an opportunity for others to benefit too. Some patients, especially the elderly are very sensitive to the effects of Madopar and may find the usual starting dose of Madopar 125 simply too much to take. Others on long-term therapy experience fluctuations in performance which may be helped by administration of smaller, more frequent doses. For these and other patients whose problems are dose-related the extra precision of Madopar 62.5 may well be the answer.
