Piportil DEPOT PIPOTHIAZINE PALMITATE

From May & Baker, the company that developed Largactil.

New Piportil depot is a unique phenothiazine derivative from May & Baker, the company that helped to revolutionise the treatment of psychoses with the introduction of Largactil.

Clinical trials show Piportil depot to exert a potent antipsychotic action against a wide range of symptoms. Piportil depot is a fast acting phenothiazine, and causes minimal sedation and depression.

These benefits, together with its four week duration of action facilitate rapid and maintained social integration for your psychotic patients, helping you to solve the psychotic puzzle.

Piportil DEPOT

A new way to treat the many facets of psychoses.
Announcing an outstanding new 5-volume reference work from CHURCHILL LIVINGSTONE . . .

THE CLINICAL NEUROSCIENCES

the only single-source work to integrate the five key disciplines—
• neurology • neurosurgery • neuropathology • neuroradiology • neurobiology

Edited by Roger N. Rosenberg, M.D.

Sydney S. Schochet, Jr., M.D. (NEUROPATHOLOGY)  William D. Willis, Jr., M.D., Ph.D. (NEUROBIOLOGY)

Plus 136 eminent contributors — all of whom are in the mainstream of neurological practice, teaching and research!

Unequalled in depth, in scope, in detail. The most authoritative, explicit work ever published in the field...

- Over 3,000 vivid, clearly defined illustrations!
- Over 200 valuable tables!
- 3,708 information-packed pages!
- Five in-depth volumes edited by an eminent professional in that discipline — each volume completely indexed!

Plus — a bonus for those who order the entire set:
- A sixth volume containing a separate, cross-referenced index to all five volumes for instant access to interdisciplinary information on specific clinical and disease entities!

This magnificent five-volume reference reveals the latest developments in neurochemistry, neuropharmacology, neuroimmunology, neurovirology, neurogenetics, and molecular biology . . . offers significant new insights into neurological functions, the pathogenesis and early management of neurological diseases . . . deals thoroughly with the relevant use and value of revolutionary diagnostic and treatment advances, including: computerized axial tomography, positron emission tomography, new microsurgical techniques, plasmapheresis, and...

THE CLINICAL NEUROSCIENCES
is available as a 5-volume set with separate cumulative index volume 3,708 pages over 3,000 illustrations £400.00

OR

Separately as individual volumes (except volumes 1 and 2 which are only available together)

Volumes 1 & 2 Neurology/Neurosurgery £150.00
Volume 3 Neuropathology £70.00
Volume 4 Neuroradiology £120.00
Volume 5 Neurobiology £78.00

Please order from your usual medical bookseller or in case of difficulty direct from the Publishers at this address (enclosing payment).

A new era in the treatment of Parkinson’s disease has begun. Eldepryl is the new, selective inhibitor of the enzyme responsible for dopamine breakdown in the brain. Used in conjunction with L-dopa or L-dopa/decarboxylase inhibitor combinations, Eldepryl provides the next vital step in treatment of all stages of Parkinson’s disease – dopamine conservation.

The patient benefits of Eldepryl are substantial – daily L-dopa intake can be immediately cut by 20% in most cases reducing unwanted side-effects and extending the useful life of L-dopa. With a notable lack of adverse effects, Eldepryl significantly reduces akinesia, smoothes out “on-off” effects, and has been shown in recent long-term studies to significantly prolong the evolution of the disease.

With Eldepryl, there is no complicated dosage regime to remember, simply one tablet daily, together with a 20% reduction of L-dopa on the first day of treatment, is usually all that is required.

SPECIALTY FELLOWSHIP IN SURGICAL NEUROLOGY
FRCSEd (SN)

A diet of the Specialty Fellowship Examination in Surgical Neurology will be held on 18 September 1984. Surgeons working in the specialty of Surgical Neurology who wish to enter for the Examination may obtain a copy of the Regulations and application form from the Examinations Secretary, The Royal College of Surgeons of Edinburgh, Nicolson Street, Edinburgh EH8 9DW.

Candidates who should normally hold a Diploma of Fellowship of a Surgical College or an equivalent Diploma are required to have three years’ post-Fellowship experience in Surgical Neurology of which one year must normally have been in an approved centre in the UK. Candidates must submit written evidence of their experience in the specialty including their operative experience. Candidates should note that the format of the Examination has been changed so that there are no longer separate oral examinations in neuroanatomy, neurophysiology, neurochemistry and neuropathology. These subjects are however still examined in depth as part of oral in operative surgery, investigation and non-operative management.

Applications for entry must be received by 3 August 1984. Fee: £135.

AVIATION MEDICINE

This authoritative and highly readable account of the little known specialty of aviation medicine will interest both general readers and those interested in it as a career. Comprehensive information on the management of airline passengers with particular medical conditions before, during, and after flight will help doctors faced with deciding whether or not their patient is fit to fly and with coping with a medical emergency in the air while themselves passengers on board an aircraft. The chapters on the problems of altitude, acceleration, the function of the special senses in flight, special forms of flight, and aviation psychology describe clearly and precisely the physiological and behavioural effects that flight imposes on man.

Amplaid MK10
Multisensory Evoked Potential System...

The Amplaid MK10 is a multisensory evoked potential system designed for routine clinical procedures. The unit automatically sets up suitable stimulation and acquisition parameters for any selected test.

Operating the MK10 is a simple matter: by just touching a button the request for test selection will appear on the MK10 display: one more touch and everything is ready to start, while the display now shows the patient's ongoing activity.

The Amplaid MK10 is provided with a dual cursor for amplitude and latency measurements and two memories for validation purposes. The built-in electrode impedance tester and 115mm heat sensitive paper printer combine to provide a complete ready to operate system.

...the perfect answer for all Evoked Potential Testing Situations.
Precision, efficiency and reliability. Cromwell Hospital's Department of Neurophysiology provides the Consultant Neurologist and Neurosurgeon with a proven environment for maintaining the highest standards in the practice of his specialty.

The Department incorporates the very latest technological advances in the provision of diagnostic, therapeutic, surgical, nursing and rehabilitation services. Specialists hold regular clinics in neurosurgery, neurology and clinical neurophysiology.

An extensive range of tests is at your disposal from single screening tests to complex neurophysiological and neuro-otological investigations suitable for all age groups.

Of particular interest to specialists is the new Cromwell Centre for Auditory and Speech Disorders. Fully equipped for paediatric audiological assessment, audiology, speech therapy and rehabilitation, this is the only purpose-built private facility of its type in the United Kingdom.

Intracranial Aneurysms
A Text and Atlas
Compiled by John L. Fox, Morgantown

If you perform surgery for cranial aneurysms in your practice, Intracranial Aneurysms is a work you don’t want to be without. This three-volume set comprises the most thorough surgical atlas and reference to the diagnosis and treatment of intracranial aneurysms currently available.

Throughout this work, the emphasis is on surgical techniques—especially microvascular techniques—which the author has found effective in his extensive experience. The many color photographs and illustrations of “living anatomy”—taken through the operating microscope—make this book an unparalleled surgical atlas.

Volume 1

1983. 177 figures. XXIX, 644 pages
Cloth DM 390,—* (approx. US $ 152.90)
ISBN 3-540-90717-3

Volume 2
From the contents: Prognosis and timing: Preoperative and medical therapy. Anesthesia: Management; Induced hypertension. Cereatomy for aneurysm: Control of intracranial pressure and circulation; Instrumentation; Aneurysm clips; Protective coatings; Cranial approaches; Tissue section and resection; Special methods of treating the aneurysms; Operative complications and postoperative care. Carotid artery ligations in the neck. Technique of aneurysm surgery: Frontotemporal approach; Anterior communicating and anterior cerebral artery aneurysms; Internal caroid artery aneurysms; Middle cerebral artery aneurysms; Basilar artery aneurysms; Vertebral artery aneurysms. Index.

1983. 354 figures (111 figures in full color). XXV, 537 pages
Cloth DM 420,—* (approx. US $ 164.70)
ISBN 3-540-90863-3

Volume 3

1983. XXIII, 360 pages
Cloth DM 320,—* (approx. US $ 125.50)
ISBN 3-540-90864-1

* Volumes may be purchased separately at the prices indicated or as a set for DM 990,—, a savings to you of DM 190,—.

Surgical Approaches to the Spine
by Robert G. Watkins, Inglewood
Illustrated by Ted Bloodhart
With contributions by M. L. J. Apuzzo, R. C. Breslau, P. Dyck
1983. 197 figures in color. XI, 190 pages
Cloth DM 348,— (approx. US $ 136.50)
ISBN 3-540-90758-0

...an excellent how-to-do-it manual for a large variety of surgical approaches to the spine. It covers various aspects of all of the regions, extending from the upper part of the cervical spine to the lumbosacral junction. Watkins uses many excellent color photographs of his dissections, which are well labeled and well coordinated with Bloodhart’s drawings and the text. Following the general, introductory chapter on the specific region of the spine, there are step-by-step, detailed instructions for each surgical approach. Special cautions and maneuvers are highlighted. I highly recommend this book to any surgeon who may occasionally have the need to approach any area of the spine using a method other than the usual straight vertical midline posterior approach.

Herbert Kaufer, M.D.
The Journal of Bone and Joint Surgery

Modern Neurosurgery
Volume 1
Edited by M. Brock, Berlin
1982. 158 figures, 95 tables. XIV, 484 pages
DM 98,— (approx. US $ 38.50)
ISBN 3-540-10972-2

“This volume of almost 500 pages presents 55 of the 800 papers read at the 7th International Congress in Neurosurgery in Munich in 1981. The 55 papers have been selected very carefully and divided into 10 sections covering a wide range of neurosurgical topics from technical development and head injury to vasospasm and functional neurosurgery. All of the papers which have been selected have something new to offer and are written in a style which makes them easy to follow.”

Traumatology of the Skull Base
Anatomy, Clinical and Radiological Diagnosis, Operative Treatment
Edited by: M. Samii, Hannover and J. Brihaye, Brussels
1983. 103 figures. XIV, 240 pages
Cloth DM 98,— (approx. US $ 38.50)
ISBN 3-540-12528-0

The complex architecture of the skull base makes treatment of injuries to this region the concern of a wide variety of specialties. In an effort to elucidate the pathophysiology, diagnosis and management of such injuries, a unique study group of anatomists, maxillofacial surgeons, neuroradiologists, neurosurgeons, and otolaryngologists was formed. The results of this cooperative undertaking are contained in this book and include recent advances in micro- and macrosurgery and their significance for the treatment of traumatic and neoplastic lesions, as well as indications and procedures for innovative reconstruction surgery of the skull base (including the extracranial compartments bone, dura, blood vessels, and nerves).

The Craniosynostoses
Causes, Natural History, and Management
Medical Illustrator: D. Cain
1982. 158 pages. X, 331 pages
Cloth DM 230,— (approx. US $ 90.20)
ISBN 3-540-11274-X

“This book, by a plastic, an oral, and a neurological surgeon, is based on the experience of the South Australian Cranio-facial Unit and can be strongly recommended, particularly to neurosurgeons. The contents are extremely well written, beautifully illustrated, and well set out, and they cover simple craniosynostoses and the more complex rarer craniofacial syndromes. The book concludes with recommendations for the organization of a craniofacial unit, a table of craniofacial syndromes, and an extensive reference list.”
