Epilim is effective in both partial a
presentations allows a finely-tuned dos

Patients Information
Presentation: Epilim is available as white round tablets, containing 50 mg, 100 mg, 200 mg and 250 mg of sodium valproate.
Indications: Epilim is indicated for the treatment of partial seizures, generalised seizures and myoclonic absence seizures. It is also indicated for the prophylaxis of migraines and in bipolar disorder.

Treatment: The recommended dose is 500 mg to 1500 mg daily, divided into two or three doses. The dose should be increased gradually, usually over a period of one to two weeks, until the patient is seizure-free. The maximum daily dose is 3000 mg. The dose may be reduced if the patient is experiencing adverse effects.

Side effects: The most common side effects of Epilim include nausea, vomiting, diarrhea, and dizziness. Less common side effects include skin rash, anemia, and liver enzymes changes.

Contraindications: Epilim is contraindicated in patients with a history of severe liver disease, active peptic ulcer disease, or severe gastrointestinal bleeding.

Warnings: Epilim should be used with caution in children less than 18 years of age, pregnant women, and breastfeeding women. It is also contraindicated in patients with a history of suicidal tendencies.

How to use: Epilim should be taken orally with food to reduce gastrointestinal side effects. It should be stored at room temperature, protected from light.

Sanofi is a global pharmaceutical company that develops, manufactures, and markets a wide variety of healthcare products.

Sodium Valproate

A FIRST-LINE THERAPY FOR BOTH CHILDREN AND ADULTS.
