

**Data extraction items**

1. Title
2. Where was the study conducted?
3. Aim of study
4. Study design:
  - a. Randomised controlled trial
  - b. Non-randomised experimental study
  - c. Cohort study
  - d. Cross-sectional study
  - e. Case-control study
  - f. Systematic review
5. Start and end year
6. Population description
7. Total number of patients (males, females)
8. Inclusion criteria
9. How was a diagnosis of FND confirmed?
10. How were patients identified?
11. Features included in FND diagnosis:
  - a. Functional seizures
  - b. Movement disorders
  - c. Limb weakness
  - d. Dystonia
  - e. Tremor
  - f. Gait disorder
  - g. Myoclonus/jerk
  - h. Sensory disturbance
  - i. Functional cognitive disorder
  - j. Other
12. Exclusion criteria
13. Was a reference/comparison population used?
14. How was pain identified (e.g. health records, questionnaires)?
15. How was pain described?
16. Were there any pain-related diagnoses:
  - a. Chronic pain syndrome
  - b. Fibromyalgia
  - c. Complex regional pain syndrome
  - d. Irritable bowel syndrome
  - e. Joint pain
  - f. Cancer-related pain
  - g. Neuropathic pain
17. Frequency of pain in FND
18. Was a pain scoring system used, and if so, what data was provided?
19. Were any clinical features associated with pain amongst patients with FND (e.g. demographics, FND subtype)
20. Chronology:
  - a. FND diagnosis before pain
  - b. Pain presentation before FND diagnosis
  - c. Unclear
21. Was pain managed, and if so, how?
